CAFFEINE EXTRACTION

POST LAB PROJECT

Give the students one week to research other extraction processes used in industry. Suggested questions to be answered:

1. Which industry produces this product?

2. What is the name of the product?

3. What is the extraction process called?

4. What chemical properties are being put to use in this extraction?

5. Compare and contrast the processes you researched with the one used in the caffeine extraction we studied and performed in class. This could be presented by flow charting each process.

References should be cited and the reports may be either written or brief oral reports as per teacher preference.
